

New-generation product dyeing technology

GAME DYE™

GAME DYE is a garment dyeing method using dye technology cultivated by our company over many years, and an in-house designed high-pressure dyeing machine called Dye Actor. In addition to its unique texture and vintage feel, which cannot be obtained through ordinary raw fabric dyeing, GAME DYE also allows for further product development through various post-processing methods.

Our original GAME DYE fabrics

We offer our own original garment dye fabrics with excellent post-dyeing shrinkage control. We also offer fabrics that have undergone our special processing methods (TECHNO VINTAGE BJ, KONBU-N, DIMA ALORA, etc.).

TECHNO VINTAGE BJ

KONBU-N

DIMA ALORA

Fashionable finishing and GAME DYE functionality

It's possible to produce various expressions at the same time as dyeing. Unique textures which can only be obtained with garment dyeing can also be produced

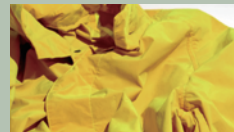

Regular
(Including polyester, nylon and natural fibers)

Shibori
(Tye dyeing)

Onibegie
(Dyeing using natural ingredients)

Kasane
(Multilayer dyeing)

Surf Vintage
(Uneven dyeing)

Digo Vintage
(Indigo dyeing)

Konbu
(High coloring and high hardness)

WG Konbu
(WG + high coloring and high hardness)

Recoloring at our company

Delivery of recolored products

*If there is a possibility that accessories (buttons, fasteners, cords, etc.) may be damaged due to recoloring, we may ask clients to remove the accessories and reattach after recoloring.

*The recoloring color is either black or navy, and is specified by our company.

*Although we carefully manage the recoloring, the colors will not be 100% the same as the original.

*Some materials cannot be processed; please confirm with our sales staff.
